23. (New) A membrane or matrix for controlling the permeation rate of a drug, the membrane or matrix comprising at least one siloxane elastomer composition comprising an elastomer and optionally a non-crosslinked polymer, wherein the elastomer composition comprises poly(alkylene oxide) groups and said poly(alkylene oxide) groups are present in said elastomer or non-cross-linked polymer as blocks, or as blocks and alkoxy-terminated grafts of polysiloxane units, said blocks or blocks and grafts being linked to the
